Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Please amend claims 1, 8, 14, 22, and 23 as indicated below (material to be inserted is in **bold and underline**, material to be deleted is in **strikeout** or (if the deletion is of five or fewer consecutive characters or would be difficult to see) in double brackets [[]]):

Listing of Claims:

1. (Currently Amended) A self-propelled watercraft, comprising:

a body made at least partially of a weldable polymer material, wherein the body includes a surface and at least one of a deck and a hull; and

a weld coalesced to the surface of the body and comprised at least partially of the weldable polymer material; and

an item of outfitting welded to the surface of the body coalesced to the weld.

- 2. (Original) The personal watercraft of claim 1, wherein the watercraft is a kayak.
- 3. (Original) The personal watercraft of claim 1, wherein the item of outfitting is a seat support.
- 4. (Original) The personal watercraft of claim 1, wherein the item of outfitting is a structural member that supports the hull of the watercraft.
- 5. (Original) The personal watercraft of claim 4, wherein the item of outfitting is a pillar that supports the hull of the watercraft.

6. (Original) The personal watercraft of claim 1, further comprising an electrically conductive member disposed at least partially between the item of outfitting

and the interior surface of the watercraft.

7. (Original) The personal watercraft of claim 6, wherein the electrically

conductive member is an electrically conductive cable with a weldable thermoplastic

coating.

8. (Currently Amended) The personal watercraft of claim 1, wherein the item

of outfitting is welded coalesced to the weld, which is coalesced to an interior surface

of the body.

9. (Original) The personal watercraft of claim 1, wherein the weldable

polymer material is polyethylene.

10. (Original) The personal watercraft of claim 1, wherein the weldable

polymer material is a composite polyethylene material having a fiberous material

dispersed within the polyethylene.

11. (Original) The personal watercraft of claim 1, wherein at least one of the

deck and the hull is thermoformed.

12. (Original) The personal watercraft of claim 1, wherein the watercraft is

rotationally molded.

13. (Original) The personal watercraft of claim 1, wherein the item of outfitting

is at least partially made of the weldable polymer material.

Serial No. 10/801,376

14. (Currently Amended) A self-propelled watercraft, comprising:

a body made at least partially of a weldable polymer material, wherein the body

includes an interior surface;

a weld coalesced to the interior surface of the body and comprised at least

partially of the weldable polymer material:

an item of outfitting coalesced to the weld welded to the interior surface of the

body; and

an electrical conductor disposed at least partially between the interior surface of

the body and the item of outfitting.

15. (Original) The personal watercraft of claim 14, wherein the item of

outfitting is a seat support.

16. (Original) The personal watercraft of claim 14, wherein the watercraft is a

kayak.

17. (Original) The personal watercraft of claim 14, wherein the item of

outfitting is a structural member that supports at least one of the hull and the deck of the

watercraft.

18. (Original) The personal watercraft of claim 17, wherein the item of

outfitting is a pillar that supports the deck and hull of the watercraft.

19. (Original) The personal watercraft of claim 14, wherein the weldable

polymer material is a thermoplastic material.

20. (Original) The personal watercraft of claim 14, wherein the thermoplastic

material is polyethylene.

Page 5 - AMENDMENT

Serial No. 10/801,376

21. (Original) The personal watercraft of claim of claim 14, wherein the item of outfitting is made at least partially of the weldable polymer material.

22. (Currently Amended) The personal watercraft of claim 14, wherein the

electrical conductor is contained within the weld a weldable intermediate that is

disposed between and welded to the item of outfitting and the interior surface.

23. (Currently Amended) The personal watercraft of claim 14, wherein the

weldable intermediate weld includes an electrically conductive cable contained within

an outer polyethylene portion.

24. (Withdrawn) A method of manufacturing a self-propelled watercraft,

wherein the watercraft includes a body made at least partially of a weldable polymer

material and also includes an item of outfitting coupled to the body, the method

comprising:

placing a weldable intermediate structure between the item of outfitting and the

body such that the weldable intermediate structure is in contact with a surface of the

item of outfitting and a surface of the body; and

heating the weldable intermediate structure to weld the weldable intermediate

structure to the item of outfitting and the body.

25. (Withdrawn) The method of claim 24, wherein the weldable intermediate

structure, the body and the item of outfitting are each at least partially made of the same

material.

26. (Withdrawn) The method of claim 24, wherein the weldable intermediate structure includes an electrical conductor at least partially enclosed by a weldable polymer outer layer, and wherein heating the weldable intermediate structure includes

running an electric current through the electrical conductor.

27. (Withdrawn) The method of claim 26, wherein running an electric current

through the weldable intermediate structure heats the surface of the body and the

surface of the item of outfitting sufficiently to bring the surface of the item of outfitting

and the surface of the body to a temperature at which welding can occur.

28. (Withdrawn) The method of claim 24, wherein the item of outfitting is a

seat support.

29. (Withdrawn) The method of claim 24, wherein the item of outfitting is a

structural member that supports at least one of the deck and the hull of the watercraft.

30. (Withdrawn) The method of claim 29, wherein the item of outfitting is a

pillar that supports the deck and hull of the watercraft.

31. (Withdrawn) The method of claim 24, wherein the watercraft is a kayak.

32. (Withdrawn) The method of claim 24, wherein the weldable polymer

material is polyethylene.

33. (Withdrawn) The method of claim 24, wherein the item of outfitting is

made at least partially of the weldable polymer material.

34. (Withdrawn) A method of manufacturing a self-propelled watercraft,

wherein the watercraft includes a body made at least partially of a weldable polymer

material, and also includes an item of outfitting made of the weldable material and

coupled to the body, the method comprising:

placing an electrically conductive element between a surface of the body and a

surface of the item of outfitting, wherein the electrically conductive element is at least

partially covered by a layer of the weldable material; and

heating the electrically conductive element by passing an electrical current

through the electrically conductive element to cause the layer of the weldable material

to weld to the surface of the item of outfitting to the surface of the body of the watercraft.

35. (Withdrawn) The method of claim 34, wherein the item of outfitting is a

seat support.

36. (Withdrawn) The method of claim 34, wherein the body includes a deck

and a hull, and wherein the item of outfitting is a structural member that supports at

least one of the deck and the hull.

37. (Withdrawn) The method of claim 34, wherein the item of outfitting is a

pillar that supports the deck and hull of the watercraft.

38. (Withdrawn) The method of claim 34, wherein the weldable material is

polyethylene.
